TIMKEN BEARINGS
are helping engineers to
design for Victory. They
will help them to plan
for prosperity when the
war is over.

Engineers responsible for the design of American mechanized armament and the machines that make it have found that they can successfully meet every bearing requirement with one kind of bearing—the Timken Tapered Roller Bearing.

Friction elimination; precision; radial, thrust and combined load capacities; maintenance of alignment of shafts and gears; all of these qualities are inherent in the design and construction of the Timken Bearing.

You never may be called upon to design military equipment, but a thorough knowledge of the Timken Bearing and its universal application will be one of your most valuable assets no matter what branch of mechanical engineering you eventually may enter.

We always will be glad to give you any information you may require—including the solution of specific bearing problems.

THE TIMKEN ROLLER BEARING COMPANY, CANTON, OHIO

Manufacturers of Timken Tapered Roller Bearings for automobiles, motor trucks, railroad cars and locomotives and all kinds of industrial machinery; Timken Alloy Steels and Carbon and Alloy Seamless Tubing; and Timken Rock Bits.

"TO PROVIDE FOR THE COMMON DEFENSE, TO PROMOTE THE GENERAL WELFARE"

Reykjavik off the port bow!

TONIGHT, somewhere at sea, a man stands on the bridge of a freighter with the life line of a nation in his hands.

He is straining his eyes for sight of one of those islands which are our country's first line of defense. To these islands must be transported huge quantities of munitions and food. And the only answer is ships, ships, and more ships.

How is America meeting this tremendous responsibility? You'll get a fair idea at such great factories as the Westinghouse plant where the machinery to drive many of those supply ships is being built, or at the huge Westinghouse-operated Maritime Commission plant which is now being erected alongside it.

The "know how" that works 24 hours a day

There, in these factories is a dramatic example of how Westinghouse "know how" is doing a job for National Defense.

What is this "know how"? It is the ability to get things done in the best possible way—learned in building prod-

ucts for the general welfare and now used in building materials for the common defense.

The same skill and ingenuity that are building those turbines for the merchant fleet, not long ago built more efficient electric refrigerators and washing machines. Again, the research skill that developed intricate new radio equipment has found ways of utilizing that equipment in important defense work.

At 17 Westinghouse Divisions, and in the plants of more than 300 sub-contractors, our energies are almost exclusively turned to the creation of \$400,000,000 worth of defense materials. It's our way of speeding the day when our "know how" will be serving America again—in the home, the farm, and the factory.

A salute to the "Class of '41"

In the all-out Westinghouse war effort, no group in our entire organization is more deeply engaged today than the 600 young engineers who last year left your campus paths to join this company. In research, design, production—they have already made important contributions.

This year many more engineers will come to us from your college and others to mesh their eager talent with our "know-how" and apply it to their country's defense. Certainly nowhere does there exist a greater opportunity for them to translate their intelligence, skill and enterprise into vital service. For Westinghouse is, always has been, and we believe always will be, "an engineer's company."

It Pays To KNOW About ZINC

In the period of America's greatest industrial development, ZINC rendered indispensable service; it is reasonable to expect that it will be utilized even more extensively in the greater developments yet to come.

ZINC has now gone to war, as an essential element in every form of fighting equipment, on land and sea, and in the air. In times of peace, it is used in an almost infinite variety of applications, from the tiny elements of zipper closures to protective coatings for the hulls of the largest ocean-going ships. You can't get away from it—ZINC comes into intimate touch with the life of every individual.

The Zinc industry itself is earnestly and wholeheartedly striving to do a worthy job in supporting the nation's war program. It is also anticipating and preparing for the day when Victory is won, when new problems must be solved.

Are You, Too, Looking To The Future?

Will you be prepared with the knowledge you must have to solve the problems of the future?

ZINC is a material that it pays to KNOW about. You can get some interesting and very valuable data from these booklets, which will be sent to you free:

"The Zinc Industry"

"More Facts About Zinc"

Better write for them now.
